

Infinite Spell Game

The screenplay from the storyboard: 14 scenes in play order, about 177 s.

1 A TOWN AT NIGHT

The world › Pixel world · **in progress** · world/pixel/night-town.toml · ~6.5 s

One continuous move. Start low and cinematic, looking up at the night sky: the purple moon and the orange moon big in the skybox. Pan down without a cut to the game's own camera, the high isometric view over the cosy pixel town, snow on the roofs and lamps lit. Then the character starts walking through the town.

NARRATOR

A town under two moons, one purple, one orange. At nine this morning, it didn't exist.

no sketch

2 PARTS, NOT CODE

The working day · not started · making/parts.toml · ~19 s

A clock in the corner: 9:00. The Atelico editor with one Claude pane. Typed: "a cosy pixel town under two moons, purple and orange". The marketplace panel opens; Claude ticks Pixel world, Moon town, Sky, Ink world and Camera path, and each installs. The scene view starts: the camera cranes down from the moons onto the town.

NARRATOR

Nine a.m. I'm Paul, and I make the Atelico editor. I ask Claude for a pixel town under two moons. It doesn't write a renderer: it installs five parts from the Atelico marketplace that are built to fit together, so adding the camera doesn't break the sky.

SKETCH - placeholder

Planting the seed

3 PLANTING THE SEED

Town seed · not started · town/seed-planted.toml · ~13 s

Clock: 10:00. Claude's pane shows one new file, `seed.lua`, being written. Then in the game: the player presses a glowing seed into open ground; the first houses grow up around it. The seed keeps pulsing at the town's centre with a ring that shows its health; one spell slot at the screen's edge holds a wind icon.

NARRATOR

The one rule no part has, Claude writes: you plant a seed, and the town grows around it. If the seed breaks, the town is gone. You start with one spell: wind.

no sketch

4 THREE SESSIONS, ONE BUG

The working day · not started · making/agents.toml · ~17 s

Clock: 12:00. The Claude pane splits into three, labelled Monsters, Spells, Weather, each docked beside its own editor window. A creature walks straight through a house wall; one line changes in `monsters.lua`, highlighted; the next run, it walks around. The other two panes keep working.

NARRATOR

Noon. Three jobs left: monsters, spells, weather. I split Claude into three sessions, one per editor window, each changing only its own files. The first build lets monsters walk through walls; the monsters session fixes its own file, and nothing else changes.

5 THE FORECAST

Weather & moons · **in progress** · sky/forecast.toml · ~12 s

Clock: 15:00. Typed to Claude: "when do the moons line up next?" The forecast panel opens: a ring per moon and a bar per moon's hours in the sky, the alignment four days ahead highlighted. The game skips forward through four nights in a few seconds.

NARRATOR

The sky part runs each moon on its own clock, so I ask Claude when they next line up: in four game days. I skip ahead to that night.

6 THE WORLD FREEZES

The world > Cel world · **in progress** · world/cel/frozen-ink.toml · ~12.5 s

Two flashes of earlier tries: creatures reach the seed, it shatters, the town greys out (corner clock 15:30, then 16:40). Then clock 17:50, a fresh try: the two moons touch in the sky. Hard cut from warm pixels to flat ink: two or three tones, hard black lines, purple and orange the only colours. People stopped mid-step, lamps gone cold. The picture stays in the game; the corner clock and any editor beat are small overlays.

NARRATOR

Third try at this night. The moons meet. The ink-world part restyles every house, tree and townspeople in one pass. Nothing is redrawn, so nothing comes out off-style. The townsfolk freeze.

7 CLIMBERS AND DIGGERS

Weather & moons · not started · sky/monsters-rise.toml · ~10.5 s

The ground cracks under both moons' light; purple and orange ink creatures pull themselves up and go for the glowing seed: the purple ones scale a house wall, the orange ones sink into the ground and surface past it.

NARRATOR

Each moon raises its own creatures: purple ones climb over walls, orange ones dig under them. Tonight both are up, and they head for the seed.

8 SHADOWS THAT FIGHT

Town seed · not started · town/shadow-defence.toml · ~12 s

The player's wind spell icon, then the watchtower in the ink night with its spell beside it: sensor "creature in my shadow", effect "slow". Each moon throws its own coloured shadow from the tower; a creature steps into the purple one and drags to a crawl.

NARRATOR

The spells session made everything a spell: a sensor and an effect. My wind is one; the watchtower is another.

Sensor: a creature in my shadow.

Effect: slow it.

9 FIRE IN THE SNOW

Weather & moons · not started · sky/fire-in-snow.toml · ~8.5 s

The town square in the ink night, snow underfoot; burning flakes come down and hiss into steam where they land. The player runs under them and catches one; a fire icon fills the slot beside the wind icon.

NARRATOR

Both moons at once: the weather session's fire falls into the snow. Every burning flake I catch is a fire spell.

10 ORDER MATTERS

Spells · not started · spells/cast-order.toml · ~15.5 s

Clock 18:00, the same night running: a small overlay in the corner: the Fusion tile installs, while the picture stays in the ink night. The player casts fire then wind (two icons pop above the head in order): a wall of flame rises across the street and stops a line of creatures. Then wind then fire: a fireball arcs into a crowd and bursts. Each result writes in as a typed spell: name, sensor, effect.

NARRATOR

Six p.m.: Claude installs the last part, fusion, while the night keeps running. A small AI model on the player's machine invents what two spells make. Fire then wind: a wall of flame. Wind then fire: a fireball.

no sketch

11 FIRE INTO THE TOWER

Spells · not started · spells/fuse-building.toml · ~8.5 s

The player casts fire at the watchtower; its spell entry rewrites: sensor "creature in my shadow", effect "slow" becomes "slow, then burn", under a new name; the shadows get burning edges. A creature steps in, slows, and catches fire.

NARRATOR

The tower is a spell too, so I cast fire into it. The model invents a new tower: slow, then burn.

no sketch

12 FLAME ON THE ROOFTOPS

Town seed · not started · town/rooftop-wall.toml · ~10 s

Purple climbers top the house walls and cross the roofs toward the seed. The player catches a falling flake and casts fire then wind: a wall of flame runs along the roofline and the climbers fall burning. The seed's ring has drained to a quarter.

NARRATOR

The last wave: climbers come over the walls first. One burning flake, then wind: a wall of flame runs along the rooftops, and they fall.

13 THE SEED HOLDS

Town seed · not started · town/hold-the-seed.toml · ~22 s

Orange diggers burst up beside the seed, just outside the tower's shadow; the ring drains to a sliver. The player casts wind into the burning watchtower; its spell entry rewrites live (a new name; effect "sweep" added) and its burning shadow turns round the seed like a lighthouse beam. Each digger it crosses goes up in flames (hit-stop, shake); the last burns a step from the seed. A beat later the moons slide apart above; the ring stops at its last sliver.

NARRATOR

Then diggers surface right by the seed, and its ring is almost empty. The tower's shadow can't reach them, so I cast wind into it to make it move. The model invents a shadow that turns like a lighthouse beam. The last digger burns a step from the seed, and then the moons part.

14 THE MORNING AFTER

The world > Pixel world · not started · world/pixel/morning-after.toml · ~9.5 s

Dawn: back to warm pixels, the townsfolk moving again. Pull back into the editor, clock 19:00: today's six parts highlighted in the marketplace (Pixel world, Moon town, Sky, Ink world, Camera path, Fusion) beside the four files Claude wrote (seed, monsters, spells, weather); a small line "fusion: on-device · no server · \$0 per fusion"; the game's name, Infinite Spell Game.

NARRATOR

Today: six parts installed, four files written by Claude. Every part, fusion included, is in the Atelico marketplace. Ask your agent for it.
